DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to anticipate or make obvious the methods of claims 1-16 and 34, including, *inter-alia*, effecting changes in an individual's cognitive-emotive profile by determining the individual's current state from a plurality of bioelectric signals, comparing the current state to a set of templates or indices to extract a multi-dimensional cognitive-emotive profile, mapping the profile onto a set of commands, and controllably delivering brain stimulation commands to the individual to drive therapeutic and non-therapeutic stimulus interventions which result in prolonged changes to the individual's cognitive-emotive profile that outlast the stimulation and persist over a long timeframe.

Knispel (US Patent 4883067) discloses a method comprising acquiring a plurality of bioelectric signals from an individual (column 9, lines 14-24); determining a multi-dimensional cognitive-emotive profile of the individual based on the signals (column 3, lines 64-68; column 18, lines 36-43); and mapping the profile onto a set of commands for controllably delivering brain stimulation commands to the individual for therapeutic and non-therapeutic (column 8, lines 20-22) stimulus intervention (column 3, lines 43-68; column 12, lines 54-56; column 14, lines 14-28; figure 9), in order to effect a prolonged change in the individual's cognitive-emotive profile (column 18, lines 36-38). Knispel does not disclose determining the profile by using the bioelectric signals to determine a current psychological state, and comparing that state to a set of templates or

indices to extract the profile, nor does Knispel disclose the effects of the treatment outlasting the stimulation.

Kim (US Patent Application Publication 2003/0109797) teaches a method of altering a patient's cognitive-emotive profile comprising obtaining a plurality of bioelectric signals from the patient and using them to determine the patient's current psychological state (paragraphs [0011], [0015], [0036], [0039]), comparing the patient's present state to a reference model, or set of indices (paragraphs [0012]-[0013]), and using that comparison to determine a cognitive-emotive profile (paragraphs [0038]-[0039], where the chromatic bar color is indicative of the profile), in order to provide a calibrated and accurate representation of the patient's state. Kim does not teach using brain stimulation to effect changes in the patient's cognitive-emotive state, nor the changes outlasting stimulation.

The prior art of record fails to anticipate or make obvious the system of claims 17-33, including, *inter-alia*, means for acquiring an electroencephalogram (EEG) signal from an individual, neurodynamic assessor for using the EEG to establish a cognitive-emotive profile, and a transcranial magnetic stimulation (TMS) system that controllably delivers brain stimulation responsive to the cognitive-emotive profile and interactively effects persistent changes in the individual's cognitive-emotive profile that outlast the stimulation and result in improved memory function or the reduction or elimination of symptoms of an illness.

Knispel discloses a similar system, but does not disclose delivering TMS, nor the changes outlasting the stimulation and effecting changes in memory function or illness symptoms.

Epstein (US Patent 6132361) teaches a method of using TMS to provide brain stimulation feedback to an individual in response to measured emotive signals (column 1, lines 61-63; column 4, lines 15-22), but does not disclose the effects of TMS outlasting the treatment, nor the TMS resulting in changes in memory function or illness symptoms.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Patent 6652470 to Patton, which discloses similar inventions.

US Patent 5465729 to Bittman, which discloses similar inventions.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to KAREN E. TOTH whose telephone number is (571)272-6824. The examiner can normally be reached on Monday through Friday.
